Consortium/Linf. at: http://image.llnl.gov Series: IRAK Plate: 61 Row: d Column: A.T. This clone was selected for full length sequencing because it passed the following selection criteria: Similarity but not identity to protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GIVILSCYCIIISKLSHSKGHQKRKALKTTVILILAFFACWLPYYVGISIDSFILLGV

DEFINITION MUS musculus lcr-1 gene, exon 2.

ACCESSION 260113.1 GI:1655638

KEYWORDS CXC chemokine receptor 4; CXCR-4; lcr-1 gene.

CXC chemokine receptor 4; CXCR-4; lcr-1 gene.

MUS musculus (house mouse)

ORGANISM Mus musculus (house mouse)

ORGANISM Mus musculus (house mouse)

ORGANISM SQUECE

Mammalia: Butheleostomi;

Mammalia: Butheleostomi;

Mammalia: Butheleost Mus.

Eukaryota; Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi, Mammalia, Butheria, Rodentia, Sciurognathi, Muridae, Murinae, Mus. (Dases 1 to 1422)
AUTHORS Schubel, A., Burgstahler, R. and Lipp, M.
TITLE The mouse homologue of the human HIV coreceptor CXCR-4 (FUSIN):
High expression in thymus and lymphoid tissues

REFERENCE 2 (Dases 1 to 1422)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        * NOTE: This is a 'working draft' sequence. It currently consists of 39 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as truns of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Center: Washington University Genome Sequencing Center

NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

COMMENT

Direct Submission

Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 15, 2002 this sequence version replaced gi:23269619.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold had consist entirely of whole genome shotgun sequence reads. Both end sequence contigs within a contig-scaffold secure and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequence in the feature and sequence and sequence and sequence and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads and whole genome shotgun sequence reads and whole genome shotgun sequence reads and whole sequences and whole sequences and whole sequences are the sequence reads and sequence and sequence and sequence and sequence and sequence and sequence and sequence and sequence and sequence and sequence and sequence and sequence and sequence and sequence and sequence and sequence and sequence and sequence and sequence and sequence an

Mouse CXC chemokine receptor binding to PBSF/SDF-1 pre-B cell stimulatory factor - is useful for screening of potential HIV infection and AIDS inhibitors.

Claim 3; Page 39-42; 76pp; Japanese.

The present sequence encodes a murine CXC chemokine receptor which binds to the mouse CXC chemokine pre-B cell stimulatory factor PBSFS0BF-1. The nucleic acid is isolated from mouse pre-B cell line DW34. The receptor and cells expressing it can be used in the study and mapping of the

CXCR4; mouse; neovascularisation; inhibitor; tissue repairing agent; vascularisation; ss.

```
This sequence encodes the mouse CXCR4 protein. The invention relates to remedies inhibiting neovascularisation, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a substance capable of potentiating CXCR4. Based on a finding that vascularisation is inhibited in a CXCR4 knockout mouse, it becomes possible to prepare remedies inhibiting vascularisation which contain as the active ingredient a substance capable of potentiating CXCR4, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a substance capable of gotontiating CXCR4. It is also possible to establish methods for treatment with the use of these remedies
                                                                                                                                                                                                                                                                                                         CXCR4-potentiating agents and methods useful for inhibiting neovascularization, and treating solid cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 1758 BP; 447 A; 414 C; 369 G; 528 T; 0 U; 0 Other;

The present invention relates to a method for predicting a toxic effect of a compound. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising SEQ ID 1-4925, where differential expression of the gene indicates at least one toxic effect. The method is useful for predicting at least one toxic effect of compound, predicting the profit or the progression of a toxic effect. The compound, identifying an agent that modulates the onset or progression of a toxic response, predicting the cellular pathways that a compound modulates in a cell, and identifying an agent that modulates at compound modulates in a cell, and identifying an agent that modulates at compound using a database of genes having liver toxin-induced differential expression, are useful in identifying toxicity markers in liver tissues or cells for drug screening and toxicity assays. Note: The sequence date for this patent did not form part of the printed specification, but was obtained in electronic formet directly from WIPO at fip. WIPO: int/pub/published\_pct\_sequences.

RESULT 5

Orr M;

The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatocoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.

```
The present invention relates to a method for treatment or prevention of bone diseases characterised by loss of bone mass, comprises administering to a mammal a compound that lowers the level of neuropeptide Y (NPY) in the serum or cerebrospinal fluid (CSF) or a compound that lowers the level of inositol phosphate (IP) or extracellular signal-regulated kinase (ERK). The method is specifically used to treat (including by gene therapy) or prevent osteoporossis, osteopenia or Paget's disease, but may also be used e.g., in cases of fractures or bone metastases. These diseases may also be diagnosed by detecting elevated NPY levels, including monitoring of treatment, assessing efficacy of compounds in sequence is a human NPY % receptor DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   44 GCAGGTGCAGGTAGCAGTGACCCTCTGAGGCGTTTGGTGCTCCGGTAACCACCACGGCTG

The specification describes an antibody which is specific for an antigenic fragment of gp120. This antigenic fragment binds to DC-SIGN or is exposed upon gp120 binding of DC-SIGN due to concomitant conformational change. DC-SIGN is a receptor that is specifically expressed on dendritic cells and facilitates infection of T lymphocytes with HIV. DC-SIGN is identical to a HIV-1 gp120-binding C-type lectin. DC-SIGN binds ICAM-3 (which is expressed constitutively on T lymphocytes) with high affinity. The antibody of the invention inhibits the trans denhancement of HIV entry into a T cell or macrophage facilitated by infection. The present sequence represents a human polynucleotide, which is used in the course of the invention

Inducing chemotaxis of endothelial cells, useful for regulating angiogenesis, e.g. for treating cancer, comprises treatment with stromal cell-derived factor 1 alpha.

Disclosure, Fig 1, 26pp, English.

The invention describes a method of inducing chemotaxis of endothelial cells by treatment with stromal cell-derived factor lappa (SDF1a). The method is used for trimulating EC chemotaxis, and thus angiogenesis, and is used for treating atherosclerosis, restenosis, ischaemic stroke and spinal cord injury. Inhibition of this process is useful in treatment and pacteria, fungi, protozoa or viruses such as human immunodeficiency virus (HIV) and acquired immunodeficiency syndrome (AIDS), pain, cancer and bening prostatic hypertrophy, diabetes, obesity, anorexia, bulimia, asthma, Parkinson's disease, acute heart failure, hypotension, hypertrophy, myoradial infarction, stroke, ulcers, benign prostatic hypertrophy, myoradial infarction, stroke, ulcers, benign prostatic hypertrophy, chizoane, vomiting, psychotic and neurological disorders (e.g. anxiety, schizophrenia) and dyskinesias (e.g. Huntingdon's disease), inflammatory diseases, theumatoid arthitis, diabetic retinopathy inflammatory bowel diseases, theumatoid arthitis, diabetic retinopathy inflammatory bowel heart failure, cardiac remodeling, angiogenic diseases, solid tumours, and access this seases and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and seasons and s receptor 4 (CXCR4) polynucleotide

The present invention relates to a new method for inducing chemotaxis of endothelial cells (EC). The method of the invention involves treatment with a strong and cell-derived factor is (SPFialpha). The method is used for the invitating EC chemotaxis, and thus angiogenesis, and is used for treating atherosclerosis, restenosis, ischaemic stroke and spinal cord injury, while inhibition of this process is useful in treatment and prevention of a very wide range of diseases, e.g. infection (by batteria), bypertrophy, diabetes, obesity, anorexia, bullina, asthma, allergies, hypertrophy, diabetes, obesity, anorexia, bullina, asthma, allergies, curnary retention, osteoporosis, angina pectoris, myocardial infarction, trinary retention, osteoporosis, angina pectoris, myocardial infarction, curnary retention, osteoporosis, angina pectoris, myocardial infarction, crom dyskinesias, inflammatory disease, rheumatoid arthritis, diabetic retinopathy, inflammatory bowel disease, atherosclerosis, restenosis, Alzheiner's disease, congestive heart fallure, cardiac remodelling, and perfect and method arthritis, diabetic retinopathy inflammatory bowel disease, atherosclerosis, restenosis, angiogenic diseases, solid tumours, and Kaposi sarcoma. The present condest the human CXCR4 protein of the invention. Inducing chemotaxis of endothelial cells, useful for regulating angiogenesis, e.g. for treating cancer, comprises treatment with stromal cell-derived factor 1 alpha. Identifying a gene involved in disease for treating hypoxia-regulated conditions, comprises comparing the transcriptome/proteome of two cell types under different conditions and identifying a differentially regulated gene.

Claim 37; Page 378; 538pp; English

ש מ The present invention relates to methods for identifying genes and proteins that are implicated in a specific disease or physiological condition. The method comprises comparing the transcriptome/proteome of a specialised cell type implicated in a disease or condition with that of a second specialised cell type, under two experimental conditions, and identifying a gene that is differentially regulated in the two specialised cell types under experimental conditions, ABV7816 and ABP65051-ABP65257 were identified using the methods of the invention. The coding sequences and proteins are useful for treating a disease in a ABV78039.

The present invention relates to methods and compositions for detecting an angiogenesis-associated transcript in a cell in a patient. The method involves contacting a biological sample from the patient with a polymucleotide that selectively hybridises to a sequence at least 80% identical to any of the angiogenesis-associated human polymucleotide sequences given in the specification. These angiogenesis-associated polymucleotide sequences comprise that exhibit changes in expression levels as a function of time in tissue undergoing angiogenesis. The method and the polymucleotide sequences of the invention are useful for diagnosing and treating angiogenesis and angiogenesis-associated diseases e.g. cancer. The polymucleotide sequences are also useful in the gene therapy of such disorders. The majogenesis-associated for therapeutic and prophylactic immunisation. ABX08739-ABX08953 represent angiogenesis-associated for therapeutic and prophylactic immunisation. Detecting angiogenesis-associated transcript in a cell for diagnosing treating cancer by contacting a sample with a polynucleotide that exhibits changes in expression level as a function of time in tissue Sequence 1679 BP; 407 A; 400 C; 368 G; 504 T; 0 U; 0 Other; ż Example 2; Page 217-218; 291pp; English. New microarray, comprising a matrix of cDNA probe from a set of probes immobilized to a solid surface in predetermined order, useful in the prognosis of patients with clear cell renal carcinoma.

Claim 35; Page 132-133; 179pp; English.

The present invention relates to a microarray comprising a matrix of at least one cDNA probe from a set of probes immobilised to a solid surface in a predetermined order, where a row of pixels corresponds to replicates of one distinct probe from the set. The probes are complementary to mucleic acid sequences that are expressed differentially in aggressive as compared to non-aggressive types of clear cell reach carcinoma (CC-RCC) and that hybridise to the probes under high stringency conditions. The microarray is useful for the prognosis of patients with CC-RCC, wherein aggressive and non-aggressive CC-RCC tumour types are characterised by differential expression profiles of genes that hybridise with one or more probes immobilised on the microarray. The arrays are useful for gene

ď The present sequence encodes human chemokine receptor CXCR4. The specification describes a method for modulating viral infection of a cell. the method comprises modulating a binding interaction between a cell chemokine-receptor and a surface protein of the virus. The provise is that the cell chemokine-receptor is not CXICR1 and that the virus is not HIV. The method is useful for treating or preventing respiratory virus infection in vertebrates, more particularly respiratory syncytial virus (RSV) infections, and related diseases, e.g. bronchiolitis, bronchiolitis, Modulating viral infection of a cell, for treating or preventing respiratory virus infections, bronchitis, pneumonia or atchma, by modulating a binding interaction between a cell chemokine-receptor and surface protein of the virus. The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acides Also described: (1) am assay for the detection of a particular of protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulaters and in artibody against a particular GPCR, and in the production of specific artibodies. The apptides and antibodies are also useful for detecting an antibodies are absence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, growth-related diseases, cell cregeneration-related diseases, immunological-related cell proliferative diseases, or autoimmune diseases, immunological-related cell proliferative atherosclerosis, bacterial, fungal, protozoan or viral infections, G protein-coupled receptor; GPCR; antigenic peptide; gene therapy; grotein-coupled receptor modulator; antibody; immune-related disease; growth-related disease; cell regeneration-related disease; AIDS; cancer; immunological-related cell proliferative disease; autoimmune disease; Alzheimer's disease; atherosclerosis; infection; osteoarthritis; allergy; osteoporosis; cardiomyopathy; inflammation; Crohn's disease; diabetes; graft versus host disease; hardiammation; Crohn's disease; pain; psoriasis; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; obesity; nausea; hypertension; hypotension; renal disorder; rheumatoid arthritis; trauma; ulcer; gene; ds. Use of a CXC chemokine receptor 4 (CXCR4) inhibitor, for modulating cellular adhesion or inhibiting proliferation, movement, or morphological change in a small cell lung cancer (SCLC) cell population, or for treating a subject having SCLC.

Disclosure; SEQ ID NO 1; 78pp; English

The invention relates to methods and compositions for inhibiting small cell lung cancer (SCLC) proliferation and metastasis through modulation of the composition of CXC chemokine receptor 4 (CXCR4), and optionally, that of the tyrosine kinase receptor -Xit. Administration of a CXCR4 inhibitor modulates cellular adhesion and inhibits cellular composition. The invention is based on the finding that CXCR4 is ubjquitously expressed, and c-Xit is variably expressed, in SCLC cells. The invention also discloses methods of screening for CXCR4 is ubjquitously expressed, and c-Xit is variably expressed, in SCLC cells. The invention also discloses methods of screening for CXCR4 and is therefore amenable to CXCR4 inhibitor therapy, determining whether a sample of lung cancer cells expresses CXCR4 and is therefore amenable to treatment with a combination of a CXCR4 inhibitor and a c-Xit inhibitor; and a method of assessing whether CXCR4 inhibitor and a c-Xit inhibitor combination therapy should be continued, by determining CXCR4 (and optionally c-Xit) activity in two or more the methods of the invention and SCLC patient during the course of treatment. The methods of the invention of screening SCLC, for determining whether a SCLC from individual patients is suitable for treatment with agents of the invention; of the invention, and for determining whether such treatment is effective and should be continued. The presents expresents cDNA encoding human constituted in methods of the invention.

Wan J, Wang Y;

New gene expression profile generated from primary, endothelial, epithelial, and muscle cell types, useful for identifying disease pathologies involving alterations of gene expression, e.g. cancer. WPI; 2002-740862/80

Disclosure; Page 609; 850pp; English

The invention relates to a gene expression profile comprising one or more genes (ABZ34889-ABZ35692) and generated from a cell type. The cell type of sa a coronary artery andochelium, umbilical artery or vein endothelium, actors accular endothelium, pulmonary artery conductabilium, dermal microvascular endothelium, pulmonary artery according to epithelium, prometrial pitchelium, mammary epithelium, prostate pitchelium, renal epithelium, renal proximal tubule epithelium, cepithelium, renal epithelium, renal proximal tubule epithelium, cepithelium, renal epithelium, umbilical artery smooth consists dermal fibroblast, pulmonary artery smooth muscle, dermal fibroblast, neural progenitor cells, skeletal muscle, astrocytes, cortic smooth muscle, unestine smooth muscle, lung fibroblast, coronary artery smooth muscle, cortectine smooth muscle, unestine smooth muscle, lung fibroblast, cortectine smooth puscle, unestine smooth muscle, unestine smooth muscle, unestine smooth muscle, respect to trace as ample, determining the level of RNA expression for a sample, determining the level of RNA expression for a sample, determining the level of RNA expression for a sample, cortecting expression profile is useful in identifying disease pathologies involving alterations of gene expression. The assessment of expression profiles may also be used for creating microarrays. The microarray is useful for genetic and physical mapping of genomes, DNA sequencing, genetic or dentifications and in identifying promising antibictics, antiviral or catifungal agents

Sequence 4, Application US/08202056;
Patent No. 5440021
GENERAL INFORMATION:
APPLICANT: Chuntharapai, Anan
APPLICANT: Hebert, Caroline
APPLICANT: Kim, Kyung Jin
APPLICANT: Lee, James
TITLE OF INVENTON: Antibodies to Human IL-8 Type B Receptor
NUMBER OF SEQUENCES: 8
CORRESPONDENCE ADDRESS:
ADDRESSEE: Genentech, Inc.
STREET: 460 Point San Bruno Blvd
CITY: South San Francisco
STATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ZIP: 94080

COMPUTER READABLE FORM:
MEDIUM TYPE: 5.25 inch, 360 Kb floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: patin (Genentech)
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/202,056
FILING DATE: Z5-FEB-1994
CLASSIFICATION: 436
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               645 TITGCCGACGICAGCCAGGGGGACATCAG 673
